

Visual Organization - OrgView

Not just an org chart - OrgView is the new "Data Store"

OrgView Benefits:

- Online, real time, graphical org chart
- Drill down feature to see all levels of the organization
- Data refreshed daily from HRIS – no manual updates
- Rules and permission based data display
- Export easily to PDF
- Scalable for any number of countries, subsidiaries or divisions
- One easy to use interface for data delivery

Visual Organization is a **dynamic, cloud-based Organization Chart** available for all employees that instantly reflects day-to-day organizational changes. In addition to a graphical representation of the organization structure and employees picture, user companies can display an unlimited amount of custom data about each employee.

Your employees can easily access information about reporting relationships, specific employee information, job and positional data or anything else that you feel is important, via their web browser.

As the super user for your company, you can tell the system what data fields you want displayed for each employee. The security model also allows you to restrict access to particular data fields to select groups (the number and type of user groups are completely configurable for your organization).

Visual Organization's value to your organization extends beyond the organizational chart itself. Communicating with every employee, no matter his or her location, computer or technical ability, is **efficient, cost-effective and easy**.
